## Mop-up continues as removing gear begins on the Goldrun Complex

Cool wet weather is expected through Tuesday and will aid the firefighters of the Goldrun Complex. The Goldrun Complex, located in the Kobuk Valley, consists of nine fires that continue to smolder and show little fire activity. Back hauling, the process of removing unused and unnecessary equipment, supplies, and trash has begun.

On the **Nuna Fire (#420)**, the BLM Type 2 contract Mooseheart Crew, with firefighters who assembled from Tanana, Minto and Fairbanks, begin back hauling equipment and supplies that were utilized to provide protection to Alaska Native allotments, structures, and other values at risk.

The **Onion Fire (#433)** has 12 smokejumpers continuing to engage in direct fire management measures, working close to the fire's smoldering edge. The BLM Type 2 contract K-River 1 Crew with firefighters from Allakaket, Hughes and Huslia, continues the mop up process. They are targeting remaining hot spots and deeper-burning fuels to strengthen containment and prevent flare-ups. Back hauling will begin on this fire as crews wrap up protection and mop up measures.

The **Kaliguricheark Fire (#410)**, which burned through the **Kobuk Fire (#411)**, begins the back hauling process. The smoldering fire will be monitored for any potential risk to allotments or other values at risk.

The **Hunt Fire (#409)** and **Tutuksuk Fire (#424)** are in monitor status. The **Jade (#407)**, **Karet (#408)**, and **Salmon (#423)** fires are contained and controlled. They are being monitored.
